                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC Inbraries constructed from human colon cancer cell lines. The present CC libraries constructed from human colon cancer cell lines. The present CC invention also describes a method of detecting differentially expressed CC genes correlated with a cancerous state of a mammalian cell, comprising CC detecting at least one differentially expressed gene product in a test CC sample derived from a cell suspected of being cancerous, where detection CC of the differentially expressed gene product is correlated with a CC cancerous state of the cell from which the test sample was derived. CC The polynucleotides sequences can be used in a method for detecting CC differentially expressed Tenes correlated with a cancerous state of a CC mammalian cell. The polynucleotides can also be used as probes for CC detecting and mapping related genes. They can be used in diagnosis and CC pre-metastatic or metastatic cancerous states, stages of cancer, or cresponsiveness of cancer to therapy). This is particularly for breast cancer, estrogen receptor-positive breast cancer, one cancer and colon cancer.
                                                                                                                                                                                                                                                                                                                                                                                              Matches

AAZ17038/c
ID AAZ170
cc of the 5248 polynucleotide sequences given in AAZ12532 to AAZ1779. The cc polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, and detection of polynucleotides con be used for a variety of purpose, e.g. detection of expression levels, can be used for raising antibodies for experimental, diagnostic and cc detection of polynucleotides polynucleotides can be used for raising antibodies for experimental, diagnostic and cc detect of diagnostic and cc detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to condition of such that it is polynucleotides of the invention are especially used in the cc and lung cancer. The polynucleotides of the invention are especially used in the candidate analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        28-JAN-1998;

The present invention describes a library of human polynucleotides comprising the sequences given in AAZ1253 to AAZ1779. Also described is method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ12532 to AAZ1779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polynuclpolisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two calls (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polynucleotides of the invention are especially used in the diagnosis, prognosis and management of colorectal cancer, breast cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    274 aagtegegggeent tigaageegigeeaageeaaaetggeegeeeegggggeegae 333

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre Project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Direct Submission

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitlly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazucoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial

EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqrefégenoscope.cns.fr Determination of this BAC-end sequence was carried out as part of collaboration with the European Drosophila Genome Project (EDGP) - Intrp://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre d'Etude du Polymorphisme Humanin) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Drosophila melanogaster genome survey sequence SP6 end of BACN37L08 of DrosBAC library from brosophila melanogaster (fruit Fly), genomic survey sequence.

This GSS is part of a random genomic sequencing program of thirteen
yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
exiguus, Saccharomyces servazii. Zygosaccharomyces rouxii,

lactis var. lactis, Kluyveromyces thermotolerans, Kluyveromyces
angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila,
S. kb were prepared and both extremilites were sequenced. See
Reywords for description of this sequence and for the sequence of
the other extremity of this insert.
